

DEODORANT (50ML)
NEUTRALIZES ODOUR CAUSING BACTERIA

INGREDIENTS: Distilled water, witch hazel, vegetable glycerin, Himalayan sea salt, Essential Oils: Lemon, mandarin grapefruit, geranium, cypress, clove, lavender, oregano, coriander

Did you know?

Some of the most dangerous chemicals that we put on our bodies are in the form of antiperspirants. We put it directly into the area where the lymphatic glands can be found.

You must even beware of the deodorants that claim to be natural like the rock deodorant sold as aluminum-free natural deodorant. The rock is made of magnesium-aluminum silicate!

This deodorant is an alternative that will not just act as a natural deodorant, but will naturally detoxify the body, stimulate the immune system and also help the body to get rid of the petro chemicals that may already be stored in your organs.

Note: Those of you who have been using antiperspirants and deodorants for a long time, may take longer to adjust, so please have patience and let your body heal. Some times people sweat more than they used to (this should rectify in a short while) as the essential oils clean out the lymphatic system and allow the body to detoxify. Re-apply the deodorant as often as necessary, making sure you wash regularly.

Witch Hazel has healing, anti-inflammatory and astringent qualities. It is used to tone and firm and is especially effective on oily skin.

Vegetable Glycerin is a compound that comes from vegetable oil, usually palm or coconut.

Himalayan Sea Salt is from a pristine sea that existed 250 million years ago containing 84 + minerals. The minerals were transformed by nature into ionic colloidal form, which makes them readily absorbable by the cells.

Essential Oils are extracted by various methods, usually steam distillation from plants, herbs, flowers, trees, seeds and grasses. They have been used in skin and health care for thousands of years and have marvelous therapeutic capabilities.
